S. Patent and Trademark Office						

Continuation of 5. does NOT place the application in condition for allowance because: Applicants' argue that "a digital input symbol is transmitted to a receiver by determining one or more formant frequencies that correspond to the digital input symbol" (see abstract) fails to show the aspect "processing the written character message and transmitting the written character message in character format to the communication terminal" of the invention. The examiner disagrees because formant (the arrangement of bits or characters within a group such as word) frequencies read on "transmitting in character format"..
